Introduction

Please Note:

The following material is visually disturbing and does not reflect, in any way, the Compiler's personal opinion or esoteric viewpoint. It is presented, as is, for academic interest only.

John F. Kennedy, the thirty-fifth President of the United States, was assassinated at 12:30 p.m. Central Standard Time (18:30 UTC), Friday, 22 November 1963, on Dealey Plaza in Dallas, Texas. He was fatally shot while riding with his wife, Jacqueline, in an open Presidential limousine.

![President John F Kennedy with his wife, Jacqueline, and Texas Governor John Connally with his wife, in the presidential limousine, minutes before the assassination](image)

After the shooting, Kennedy was taken to Parkland Hospital, Dallas, where attempts to keep him alive failed. Later, Kennedy's body was taken to Washington DC, and an autopsy was performed, on 22 November 1963 (the day of JFK's assassination), at the then Bethesda Naval Hospital in Bethesda, Maryland. It began at about 8 p.m. and ended about midnight (EST).

There has been a lot of speculation regarding the JFK Assassination, and numerous conspiracy theories abound. The following material contains a collection of photographs which are purported to be from JFK's autopsy; however, the "official" autopsy photographs have never been published and continue to be under seal at the National Archives.

Head-wound Testimony

"The headwound was difficult to see when he was laying on the back of his head. However, afterwards when they moved his face towards the left, one could see the large, right rear parietal, occipital, blasted out hole, the size of my fist, which is 2 and a half inches in diameter. The brain, cerebreal portion had been flurred out and also there was the cerebrellum hanging out from that wound. It was clearly an exit wound from the right rear, behind the ear. A right occipital area hole, the size of my fist." (Dr. Charles Crenshaw, Surgeon, Parkland Hospital)

"We wrapped him up... and I saw his whole head... There was no hair back there... It was blown away. Some of his head was blown away and his brains were fallen down on the stretcher." (Doris Nelson, Emergency-Room Nurse, Parkland Hospital)
Throat Wound

Above - Wound in JFK's Throat. "The Stare of Death"

"As I was cutting off his trousers around his waist, I was on the right side, there was a small entrance wound, about 4 to 8 millimeters in size. Clearly an entrance wound in the lower third of the neck, below the adam's apple in the throat. Dr. Carrico had put in the tracheotomy tube to try to assist him with breathing." (Dr. Charles Crenshaw, Surgeon, Parkland Hospital)

Unverified/Cover-up/Tampered Photographs - Questions... Conspiracy?

Photographs have been annotated by original sources to highlight areas of concern.

The following photographs are present as they were received by the compiler.

**Head Trauma**
Portable X-ray

Skull

Entry
Bone fragment wound

Bullet wound margin

Side incision

Bullet wound margins

If skin is properly closed, the bullet wound appears round about 6mm dia. This is only a rough and inaccurate estimation based upon the photo. These markings appear to be to wound and not exit. The exit point cannot be determined from this photo.

On good prints skull is seen here

Brain is not seen

Semicircle

Entry

Fragment wound

Approx. location of .45 cal entry

January 24, 1974

Bad, the drawing below is an exact copy, in regard to location and dimensions of the drawing I made for Josiah Thompson in FEB 1966.

Best wishes,

Richard Lee McCool

A pictorial representation of President Kennedy’s head wound as described by Dr. Robert N. McClelland of Parkland Hospital.
Dr. Cyril H. Wecht, M.D.
Dept. of Pathology
St. Francis Central Hospital
1200 Center E. Ave.
Pittsburgh, PA 15219

January 07, 1994

Dr. Wecht:

Confirming our telephone conversation of 01-07-94, I spoke with Dr. Kemp Clark on Wednesday, January 05, 1994. I telephoned Dr. Clark at his office at Parkland Hospital in Dallas to ask some questions regarding the assassination of President John F. Kennedy.

I asked Dr. Clark what the President's head looked like. Dr. Clark said, "The back of the President's head was blown out."

I asked Dr. Clark if the wound in the back of the President's head was an exit or an entry wound. Dr. Clark's response was, "In my opinion the wound was an exit wound."

As we discussed, I am willing to testify regarding my telephone conversation with Dr. Clark.

Yours truly,

[Signature]

Alternative Possible Shot Origins

Other theories suggest that the shots originated from locales other than the Schoolbook Depository.
